Conveyor belt SUSHI

Written by : Yukie Koide

Japanese food is not just a boom for people for other countries people, it is becoming established as admirable food genre. Speaking of its representative, isn't it SUSHI that Japanese people are familiar with? Conveyor belt sushi, where you can enjoy delicious sushi by reasonable price, is an indispensable part of our daily lives. Conveyor belt sushi is a restaurant where you can pick up what you like from a rotating conveyor and eat it, but recently, the mainstream style is to order the sushi you want to eat on a panel and bring it to your table on a conveyor. You can enjoy not only for delicious food, find high technology system at Conveyor belt sushi.

A management system that attaches an IC chip to a sushi plate, figure out the best-selling items in real time, and uses it for demand forecasting. A mechanism that collects the length of run of each sushi, judges the freshness. After running specified length, it will be discarded automatically. Conveyor belt sushi is a restaurant that combines traditional Japanese foods and the latest technology.

MK KASHIYAMA Stage. 2

MANUFACTURING

Stage 2. Factory produces brake pads. We are also manufacturing the material to use on brake pads. We are mixing many raw materials to make one brake pad material. There are strict regulation of materials in some countries.

Therefore, we are have to adapt it with our development manufacture division team. After that, development manufacture division team develop to materials that able to use at destination that has strict regulation and test it. After the sample has passed test, manufacturing division makes brake pad materials following that material recipe.

After brend material, we do it brake pad shape. The brake pad shape glued with backing plate that made in stage 1 factory, using by heat and pressure.

Next, brake pad cut by machine to make chamfer and slot for prevention squeal and crack of brake pad when people use. Our brake pad care about squeal, we are use fire to burning brake pad surface. It could help that easy to familiar with brake rotor, when people change to new brake pad. In addition, it becomes difficult to squeal.

Finally we pack brake pads with visual inspection, and we supply it to customer only production passed the test by quality assurance division team.
